

Stellar Profiles of Massive Galaxies:

Hyper Suprime-Cam Survey

vs.

Hydrodynamic Simulations

Felipe Ardila¹

Alexie Leauthaud¹, Song Huang¹,
Benedikt Diemer², Annalisa Pillepich³

¹ UC Santa Cruz, ²CfA, ³MPIA

Observations

- Consistent methodology between observations and simulations (Huang et al. 2018)
- Weak lensing data

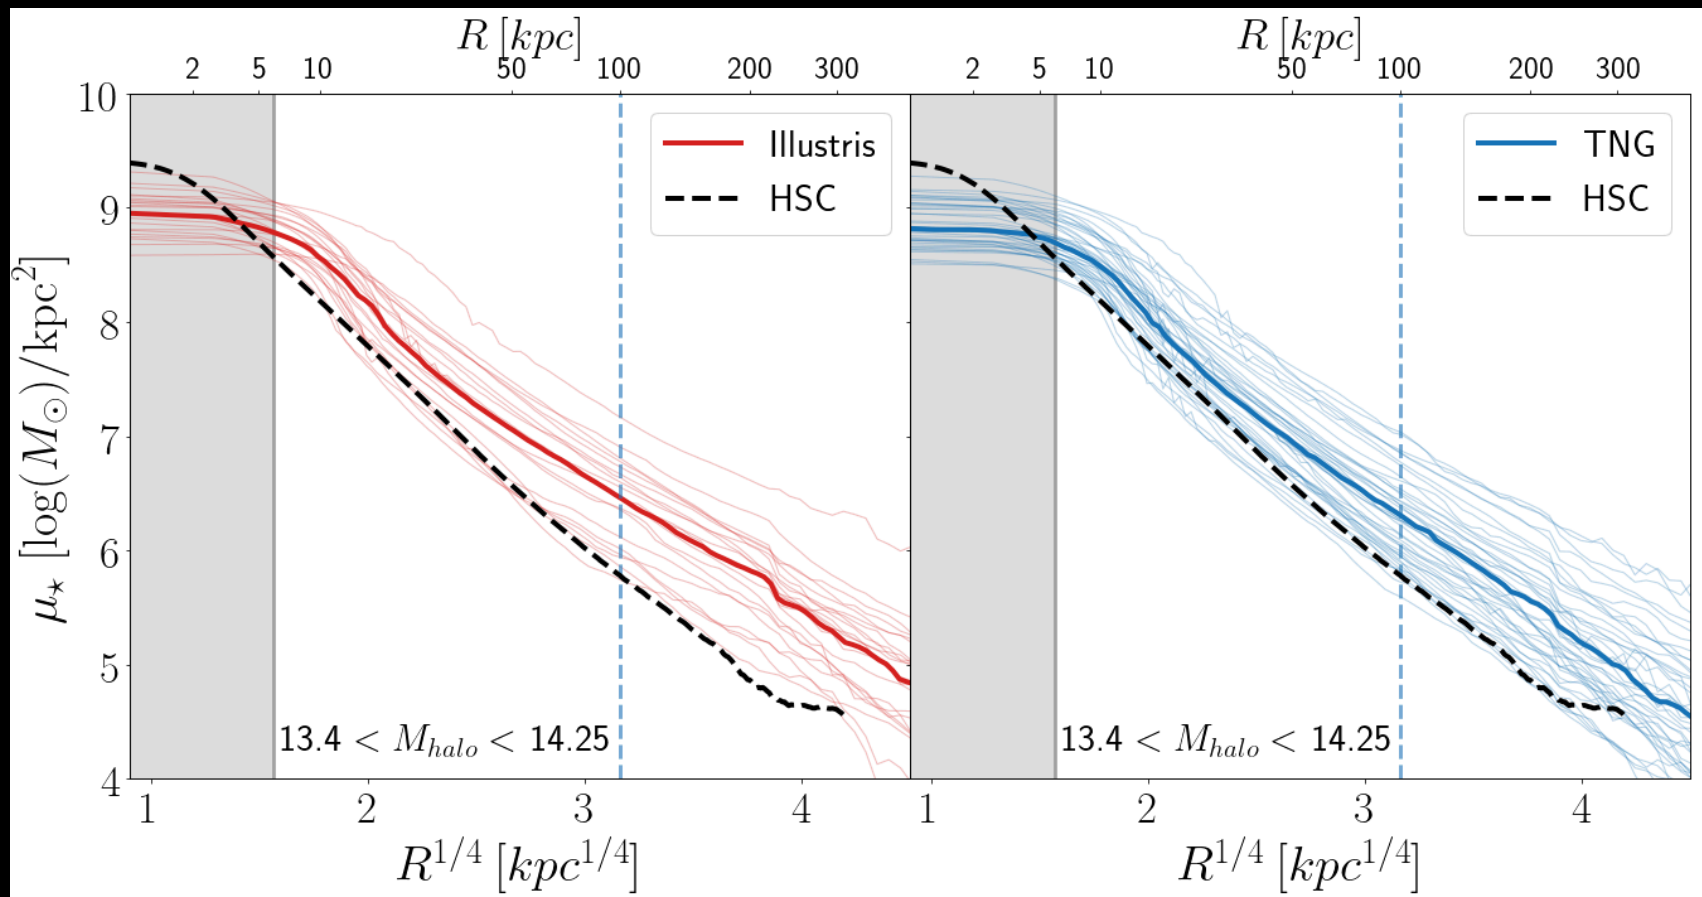

Hydrodynamic Simulations

$M_{\star}^{1d, 100}$ vs. M_{halo}

Matched by M_{halo}

Stellar Mass Functions

Main Takeaways:

- HSC provides beautiful data to help with the calibration of hydro simulations

vs.

- Getting X-ray masses for this same set of galaxies will help calibrate the simulations further
 - AGN feedback
 - baryonic effects

xmm-newton
